

[e1] LED lights do cost more than traditional incandescent bulbs.

[e2] But in the long run, they will help save energy.

[e3] They use 25 to 80 percent less power.

[e4] They also can last for years, meaning they will not need to be replaced as often.

[e5] By swapping out all light bulbs in your home or business with LED lights, you should see a noticeable drop in energy consumption.
